Summary

AOC Archaeology Group was commissioned by Queensbury Properties Ltd to undertake an historic building survey of the former Woodcroft Telephone Exchange at 2 Pitsligo Road, Edinburgh as part of the planning condition on its demolition.

The building was constructed in 1958 – 60 as a prime example of post-war public architecture, a multi-bay two to four storey cross-shaped building with a concrete superstructure set in the grounds of a former 19th estate and country house, which was demolished to make way for it.

This report has successfully recorded the building for the National Archives of Scotland and therefore no further historic building recording is recommended.

1 INTRODUCTION

1.1 Site background

- 1.1.1 AOC Archaeology Group was commissioned by Queensbury Properties Ltd to undertake a programme of historic building recording prior to the demolition of the former Woodcroft Telephone Exchange at 2 Pitsligo Road Edinburgh, prior to its demolition. The work was completed as part of a condition of planning consent on the demolition (Ref: 11/01386/FUL), the mitigation of which was set out and agreed with the City of Edinburgh Council Archaeology Service, who advise the City of Edinburgh Council on archaeology matters. The building is C Listed.

1.2 Site location

- 1.2.1 The former telephone exchange now lies empty and is located along the east side of the length of Pitsligo Road (to the west) with Clinton Road to the north and Newbattle Terrace to the south. It is located at NGR: NT 24919 71588 (Figure 1). To the east of the development is an electric sub-station (to the south side) and a large 19th century villa (to the north side). The development site is approximately 2.2 hectares in size and is cut off to the south-east side at Woodcroft Lodge.

1.3 Site condition

- 1.3.1 The building has been abandoned since 2006 and, since then, has been left derelict. It was stripped of asbestos and nearly all of its internal divisions in 2007, and has been left like this ever since. The site has undergone little structural vandalism, although has been subject to a lot of graffiti vandalism, both inside and out.

1.4 Site history

- 1.3.1 Prior to the Telephone Exchange building being built in the mid-20th century, the site was occupied by Woodcroft House (which gave the Exchange its name). It does not appear in the 1855 Ordnance Survey map (Figure 2) and first appears on the 1885 map (which was surveyed in 1877) (Figure 3), giving it a 1855 – 1877 construction date. The house slowly expanded into the 20th century as can be seen in the 1944 map (Figure 4). The house and gardens were then demolished in the late 1950s to make way for the Exchange building.
- 1.3.2 The Woodcroft Telephone Exchange was dedicated a B-Listed building by Historic Scotland in 2004, downgraded to a C-Listed building in 2010 (Ref: 50035) and was constructed between 1958 – 60 by architects Alison Hutchison & Partners. The listed building description describes and comments on the building in detail:

The Woodcroft Telephone Exchange is a good example of state-sponsored architecture of the post-war period and is a significant example of an industrial building type for the purpose of modern telecommunications. The building, although modified in the late 1980s, demonstrates Scotland's approach to post-war modern architecture combining traditional materials with an overtly functional plan and form. This method of design exemplifies the newly invoked sensitivity to historic environment, while applying forthright ideals of planning and post-war modern architecture. The building's interest includes its grid patterning of exposed concrete framing, a glazed office wing on pilotis, the random rubble detailing, and its adaptable and expandable plan which saw the addition of the north-east wing in 1970. This building was controversial at the time it was built, as it replaced a mid-19th century villa known as Woodcroft House. However, the location was crucial as it lay near the trunk telephone cables. Woodcroft Telephone Exchange, which serviced the south east of Scotland, was built during the great expansion of the Scottish communications network in the late 1950s and early 1960s when national and international telecommunications were being further developed. Commissions for such buildings were usually reserved for the Ministry of Works architects, such as Stewart Sim's Fountainbridge Telephone Exchange (listed category B in 1998). However, private architects were nominated to execute and define the Ministry of Works plans for the exchange in Pitsligo

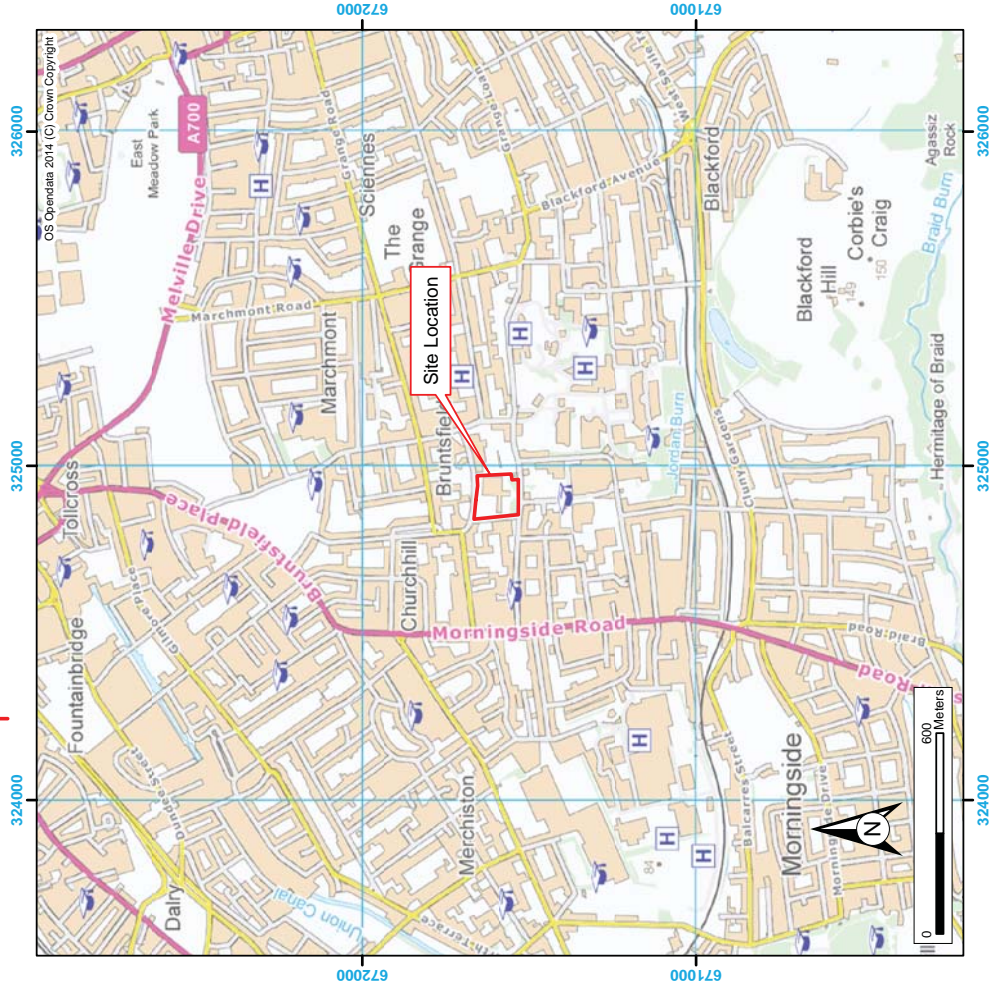

Figure 1: Site location plan and site plan

Road, possibly to satisfy the need to guarantee a quality scheme, as this modern intervention in a mature residential part of Edinburgh needed to be palatable to its neighbours and suitable to its immediate setting. Alison and Hutchison are recognised for their public architecture and have contributed to some of the most recognised post-war buildings in Leith (Kirkgate, Cables Wynd and Couper Street). They have also specialised in schools and large campus designs such as the buildings for Napier University at Merchiston, Edinburgh.’ (HS 2013).

- 1.3.3 The building was officially opened in 1961 and Sir Ronald German phoned the French Postmaster General (M Jaques Marete) from the site (Edwards 2012). Woodcroft was later joined by another exchange at East London Street in the city in 1964 and another in Canning Street and Torpichen Street in 1967 (*ibid*).

Figure 2: Extract from the Ordnance Survey map, 1855, showing the development area as undeveloped

Figure 3: Extract from the Ordnance Survey map, 1885, showing Woodcroft House and gardens

Figure 4: Extract from Ordnance Survey, 1944, showing general expansion of Woodcroft House to the west

2 OBJECTIVE

- 2.1 The objective of this programme of works was to record the building (through drawn, written and photographic record) as a preservation by record prior to its demolition.

3 METHODOLOGY

- 3.1 The building had been completely stripped out several years before, leaving nothing but a shell of the building inside, exposing the concrete floors and pillars. A Level 2 record was undertaken, which included a written and photographic record together with a representation of the architects as existing plan and elevations of the building.
- 3.2 A general and detailed photographic record was undertaken in black and white print and colour digital using a 35mm SLR and digital SLR respectively. A running register of photographs was taken on site and can be found in Appendix 1. Some of the digital images have also been used as plates for this report. A written record was also made using AOC *pro forma* recording sheets, commenting on condition, construction, phasing/function and anything else pertinent to the historical record. Annotated architects' drawings were used on site and have been reproduced here in [Figures 5 - 7](#).
- 3.3 The project has been recorded in the Online AccesS to the Index of Archaeological InvestigationS (OASIS) site (Ref: 168442). An entry has also been submitted to Discovery and Excavation in Scotland (DES) publication for inclusion in the forthcoming 2014 volume (Appendix 2). The original black and white photographs, together with a hard copy and a pdf digital version on CD of the report, has also been submitted to the National Archives of Scotland held at the RCAHMS building at John Sinclair House, 16 Bernard Terrace, Edinburgh EH8 9NX (tel. 0131 662 1456).

5 RESULTS

- 5.1 Woodcroft Telephone Exchange forms a large multi-bay four storey building in a cross shape (slightly off a north/south axis) with long north, east and west wings and a slightly shorter south wing, a later addition (see [Figure 1, 5 & 6](#)). There is also an additional north-east wing (added in 1970) to the north side and a small single storey ancillary block between this and the north wing.
- 5.2 Essentially a building with a concrete superstructure, the façade of the buildings were plain smooth concrete mock ashlar with each bay to each floor framed by projecting concrete lines ([Plates 1 - 5](#)). The east wing has the generously sized windows centrally placed (see [Plate 1](#)) although to the west and north wings, the windows are alternatively off-set (see [Plates 2, 4 & 5](#)). The ground rises to the west side, making the west wing only two storeys in height, the rest four storeys. The upper glazing of the north wing is much larger – to the third floor, the glazing takes the full width of each bay and to the upper fourth floor, the whole bay itself ([Plate 6](#)). Rising above the west wing, it has a small façade to the flat concrete roof over the west wing with an abstract arrangement of windows ([Plate 7](#)). Here, it adjoins the heavily glazed south wing ([Plates 8 & 9](#)).
- 5.3 Moving around to the east side of the building, the east elevation of the east wing has a tall plain stone-effect build adjacent with a heavily glazed stairwell to the north side ([Plate 10](#)). This is abutted by a small single-storey building forming the main generator room ([Plate 11](#)). To the north of this leads in to a small courtyard (formed from the later north-east wing from 1970), identifying an identical arrangement of the east and north wings on this side ([Plates 12 – 14](#)).
- 5.4 Moving around to the north side, the north-east wing is a wide two storey building with small windows and felt cladding ([Plate 15](#)). The north elevation of the north wing, as with east, has the stone effect build with generous fenestration to a rear stairwell and simple rectangular wide windows to the west side on each floor level ([Plate 16](#)). The west elevation of the west elevation is different - rising to four storeys with the stone effect to the south side, a central glazed section with entrance below and a brick clad section with small windows to the north ([Plate 17](#)).
- 5.5 Internally, the building has been completely stripped out (this occurred several years ago and included the complete removal of large amounts of asbestos). Therefore, all the office and other sub-divisions of the building had been removed, leaving nothing but the wide shells of each wing and their concrete superstructures. [Figure 7](#) identifies the floor plans prior to this, showing the divisions. As stated, the west wing only extended for two storeys (it only features as a basement, ground and first floor plan) with a flat concrete roof. The basement (as with everywhere) shows the thick concrete pillars used to support the huge building ([Plate 18](#)). [Plates 19 & 20](#) show the general layout of the superstructure of this wing with concrete columns supporting concrete beams, the windows boarded at this level. The north wing has the same arrangement ([Plate 21](#)) as does the east wing, although the windows are centralised to each bay in the latter, which has four storeys ([Plate 22](#)). The north wing also has smaller thin glazing to the upper floors, as can be seen in the third floor with three-part windows ([Plate 23](#)). The south wing is substantially different from the rest of the building, it being a smaller wing and heavily fenestrated. However, the concrete superstructure is identical ([Plates 24 – 25](#)). The central part of the building is linked by a large open and airy stairwell with thick circular columns forming the newels ([Plates 26 & 27](#)). There are also a number of plainer outer stairwells to the end of the wings.
- 5.8 The outer stone boundary wall which perimeters much of the site is currently heavily covered in vegetation, and is thought to belong to the original enclosure of Woodcroft House. Some of the original openings are also still intact (albeit probably repaired and/or re-mortared when the telephone exchange was built), including the circular gate jambs at Pitsligo Road.

6 DISCUSSION

- 6.1 The Woodcroft Telephone Exchange is important for both the communications industry for Edinburgh and as an example of public architecture of the late 1950s, in a period of great growth and architectural advancement in Britain as a whole. In its 'Edinburgh Post-War Historic Buildings' volume, Historic Scotland emphasise its relatively new approach to sensitivity to the environment. Whilst this is hard to fathom given its grandness of scale and concrete construction, the boundaries of the site remained and the vegetation fitted in well to conceal the edifice within.
- 6.2 Without seeing the building 'in use' or with its various departments, equipment and divided functions, it is difficult to make any remarks on the working aspects of the building without referring to only the architecture and its impact and significance at the time. However, council records should provide adequate details of the arrangements and equipment within the building, together with first-hand accounts in living memory, should any further studies of this type be undertaken.

7 CONCLUSIONS

- 7.1 This report has successfully recorded the building prior to its demolition, created a photographic record to complement that completed by the 2007 by the RCAHMS. Therefore, no further historic building recording is recommended prior to demolition.
